Sutrapada , Gir Somnath

About me

backend developer with hands-on experience in Python and Django. Familiar with building dynamic web interfaces using React.js and JavaScript, and comfortable working with MongoDB for database management. Eager to contribute and grow in a professional development environment. Quick to learn new technologies and committed to continuous improvement.

Skills

- **Languages:** JavaScript, HTML, CSS, Python
- **Frameworks:** React.js, Bootstrap, Django
- **Expertise:** Frontend Development , Responsive Design, Backend development

Projects

Employee Management System | [preview](#) | [Code](#)

- A fully functional Employee Management System built using HTML, CSS, JavaScript and react.js to manage employee records efficiently.
- Employee Records Management – Store in local storage.
- Dashboard – Show all employees details and Edit and Delete employees details.
- Responsive Design – Adapts to different screen sizes for a seamless experience.
- Local Storage Integration – Saves employee data name, age, salary, role and address in the browser for persistence.
- Interactive UI – User-friendly and intuitive interface for easy navigation.

Weather App - API base | [preview](#) | [Code](#)

- Developed a Weather App API using HTML, CSS, JavaScript, and React.js.
- Integrated real-time weather data from the OpenWeatherMap API.
- Implemented search functionality to fetch weather details for any city.
- Added location-based weather forecasts and temperature conversion.
- Integrated time zone detection to display local time for the searched city.
- Designed a responsive and user-friendly UI for seamless interaction.
